

Bio-Zyme

Your Organic Solution to a Clean Green Environment

 **Bio-Zyme** is a high performance, non-toxic, non-allergenic and biodegradable multiple enzyme degreaser, odour controller and cleaner.

Long Drops

Problem

-  These are a very real source of ground water pollution as well as having odours. There is usually too little moisture to allow biological action.

Solution

-  By adding Bio-Zyme Industrial with a large volume of water you help satisfy the moisture demand. Biological action will start to take effect immediately and odours will disappear
-  Use 150ml Bio-Zyme Industrial to 500ml water or 30mls/1ltr of water
-  Add at least 1 litre of the above solution. Splash down and around hole
-  Use solution to spray and wipe toilet seat and interior of cubicle

Marine | Campervan Portable - Cassette toilet

Problem

-  One of the biggest problems facing this industry is the uses of strong chemicals, that are toxic, to disinfect and mask the waste water effluent odours, rather than help to decompose naturally.

Solution

-  Small additions into the storage water will help degrade and deodorise the waste for acceptable disposal to sewer
-  For all portable/cassette toilets ensure 100ml of Bio-Zyme Industrial is added into the initial water charge of 2 litres. This is repeated after each empty of cassette. This will be enough to last over 2 weeks of heavy use. Do not add any other chemicals
-  For marine toilets add 100 mls of Bio-Zyme Industrial per 100 ltr capacity to initial water charge. This will last 2 weeks. Do not use any other chemicals
